

NEDeRS® Value

- Fundamentally, members with comparable networks can share the collective experience of the wider industry networks and gather a broader perspective on equipment failure that they otherwise wouldn't see.
- Members can have the knowledge that you aren't relying on things to go wrong on your own asset base, and that as an industry, the risk of equipment failures is shared and mitigated across the wider industry.
- Members can get a more immediate appreciation of risk based on the content of the reports.
- Network of Experienced operators, knowledge pool of supplier performance and maintenance issues, assists in finding contacts for the right people.
- NEDeRS is an ideal resource for more inexperienced (without 40+ years) engineers with a significant amount of valuable historic data and learning available through the database. "It may not provide all the answers, but it provides enough background for the user to ask the right questions".
- If a manufacturer has any unresolved NEDeRS, NEDeRS provides a good driver for improvement as NEDeRS members discuss events related to manufacturer equipment
